

QUÉ SE CORRIGIÓ

	ANTES	CORREGIDA
Muestra de $Z \rightarrow \nu \nu$	archivo de otro análisis (señal de vida larga)	ZjetsToNuNu, record 74910
σ de $Z \rightarrow \nu \nu$	0.7333 pb (valor filtrado)	4.201 pb — el peso medio del sample (0.0525 vs 1.0) prueba que el filtro ya está dentro del peso
σ de DY	1.27 pb	0.393 pb [XSDB, UL16]
Diboson WZ	faltaba entero	añadido [record 72754]
$Z \rightarrow \nu \nu$ bin 100-200	faltaba	añadido [record 74908]
Luminosidad	3400 pb ⁻¹ fijo (a ojo)	por canal: 4907 / 2370 / 2896 pb ⁻¹
b-tagging	DeepJet (WP de 2017)	CSVv2 medio [Tabla 10 = CSVM]
Corte $n_b \geq 1$	no se aplicaba	aplicado [Tabla 10]
Corte anti-QCD	no se aplicaba	min $\Delta\phi > 0.4$ [Tabla 10]
min $\Delta\phi$	sobre 4 jets	sobre 2 [Tabla 13]
$m_T^b > 180$, $p_T(j1)/H_T$	no se aplicaban	aplicados [Tabla 13]
Filtros de ruido + golden JSON	ninguno	7 filtros + máscara de luminosidad
Peso por p_T del top	no se aplicaba	exp(0.0615−0.0005· p_T), medido: ×0.89 en la región de señal
Orden del apilado	por tamaño	orden fijo del paper
Binning	no coincidía ni un borde	AH 250–550/20 GeV · SL 160–520/40 GeV
Último bin	se tiraba la cola	acumula el overflow, como el paper

composición del fondo (canal all-hadronic)

$Z(\nu \nu)$ 0 % $\rightarrow$ 24.1 % (paper 29.7 %) $t\bar{t}$ 73 % $\rightarrow$ 59.1 % (paper 45.5 %)

datos/modelo: 1.34 (paper 1.06) — lo que falta son dos entradas que no podemos derivar del análisis:
los k-factors NLO de V +jets y la muestra VH. Ver RUNBOOK.md, [OPEN-4] y [OPEN-5].
